

Избранные публикации официального оппонента **Борщева Олега Валентиновича**, доктора химических наук, заведующего лабораторией функциональных материалов для органической электроники и фотоники Федерального государственного бюджетного учреждения науки Институт синтетических полимерных материалов им. Н.С. Ениколопова РАН.

1. **Borshchev O. V.** Influence of chemical structure of branched and dendritic organosilicon luminophores on their optical and thermal properties / **O. V. Borshchev**, E. A. Kleymyuk, N. M. Surin [et al.] // Organic Photonics and Photovoltaics. – 2017. – Vol. 5. – № 1. – P. 1-8.
2. Skorotetcky M. S. Influence of the structure of electron-donating aromatic units in organosilicon luminophores based on 2,1,3-benzothiadiazole electron-withdrawing core on their absorption-luminescent properties / M. S. Skorotetcky, E. D. Krivtsova, **O. V. Borshchev** [et al.] // Dyes and Pigments. – 2018. – Vol. 155. – P. 284-291.
3. Shcherbina M. A. When dendrimers are not better – rational design of nanolayers for high-performance organic electronic devices / M. A. Shcherbina, **O. V. Borshchev**, A. P. Pleshkova [et al.] // Nanoscale. – 2019. – Vol. 11. – № 10. – P. 4463-4470.
4. Skorotetcky M. S. Synthesis of Nanostructured Organosilicon Luminophores Based on Phenyloxazoles / M. S. Skorotetcky, **O. V. Borshchev**, G. V. Cherkaev, S. A. Ponomarenko // Russian Journal of Organic Chemistry. – 2019. – Vol. 55. – № 1. – P. 25-41.
5. Pyatakov D. A. Heck Synthesis of New Organosilicon Oligo(arylenevinylens) / D. A. Pyatakov, **O. V. Borshchev**, M. S. Skorotetcky, S. A. Ponomarenko // Russian Journal of Organic Chemistry. – 2019. – Vol. 55. – № 10. – P. 1562-1568.
6. Zaborin E. A. Synthesis and Thermal and Phase Behavior of Polysiloxanes with Grafted Dialkyl-Substituted [1]Benzothieno[3,2-b][1]benzothiophene Groups / E. A. Zaborin, **O. V. Borshchev**, M. S. Skorotetskii [et al.] // Polymer Science,

Series B. – 2022. – Vol. 64. – № 6. – P. 841-854.

7. Trul A. A. Operationally Stable Ultrathin Organic Field Effect Transistors Based on Siloxane Dimers of Benzothieno[3,2-b][1]Benzothiophene Suitable for Ethanethiol Detection / A. A. Trul, V. P. Chekusova, D. S. Anisimov, **O. V. Borschhev** [et al.] // Advanced Electronic Materials. – 2022. – Vol. 8. – № 5. – P. 2101039.

8. Sidorenkov A. Characterization of a high light yield liquid scintillator with a novel organosilicon fluor developed for astroparticle physics experiments / A. Sidorenkov, **O. Borschhev**, A. Fazliakhmetov [et al.] // The European Physical Journal C. – 2022. – Vol. 82. – № 11. – P. 1038.

9. Skorotetskii M. S. Novel Approach to the Synthesis of Bithiophenesilane Dendrimers with Efficient Intramolecular Energy Transfer / M. S. Skorotetskii, **O. V. Borschhev**, E. A. Kleimyuk [et al.] // Polymer Science, Series C. – 2023.

10. Polinskaya M. S. The influence of terminal alkyl groups on the structure, and electrical and sensing properties of thin films of self-assembling organosilicon derivatives of benzothieno[3,2-b][1]benzothiophene / M. S. Polinskaya, A. A. Trul, **O. V. Borschhev** [et al.] // Journal of Materials Chemistry C. – 2023. – Vol. 11. – № 5. – P. 1937-1948.
